A REVOLUTIONARY  
**GAME CHANGER**

Multifunctional

Deposit welding

Hand-held EDM machine

High efficient ultrasonic polishing

*Saving your time beyond imagination!*

**Tracytec**

Smart solutions for welding and polishing of moulds

# The first and only one in the world!

TTW-610 is a revolutionary “game changer” for mold repairing. It does amend dents and cavities in a way one would imagine to be possible.

Many repair jobs can be done as “five minute crafts”, and many cases without having to take the mold apart. We call the method “deposit welding” – the first and only one in the world.

## Multifunctional

The TTW-610 is a multifunctional machine which can weld, refurbish, texture and do basic EDM work.

TTW-610 can be used for:

- Engraving and can cut smaller surfaces and corners.
- Coating with tungsten/tungsten in a very large thickness.
- Welding form steel, copper and copper alloys, aluminum and much more.

## Deposit welding

You deposit what you need and nothing more, then you can often refurbish without need of machining.

*The TTW-610 is delivered in a high quality case.*

### Ultrasonic & low-frequency vibrations

The TTW-610 works using both ultrasonic vibrations as well as low-frequency vibrations, which enables it to effectively grind/polish excess material away using diamond files, polishing sticks etc.

### Specifications

Size	370 × 175 × 190 mm
Weight N/G	9,6 kg / 18,0 kg
Power	1200W / 230V, 50 Hz

### Hand-held EDM machine

The TTW-610 can be used as a hand-held EDM machine and in this function can both remove excess material as well as make the surface appear sparked.
